DETAILED ACTION

Allowable Subject Matter

1. **Claims 14,16-20,45-47** are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art of record fails to disclose or render obvious a method for poultry farm comprising, in addition to other known in the art steps, the step of introducing at least a second plurality of birds in the at least one poultry house no later than two days after the processed litter has been placed therein and thereafter raising the second plurality of birds in the at least one poultry house. The Webb et al. patent teach similar method for poultry farming; however, Webb et al. lack a new group of birds can be introduced into a poultry house having processed litter in a time as short as two days after the litter has been processed and placed in the poultry house. The two days after the litter has been processed is significant because it reduces downtime as mentioned in the specification pages 11 & 12, "...As a result, the one to two week down time for tilling litter (step 170) and heating the poultry house to burn out ammonia (step 180) is reduced to only a day or two. This reduced turn-around time between flocks can significantly increase the throughput (or productivity) of a poultry farm, and may thereby significantly enhance profit for the poultry farmer. In addition, the reduction of ammonia results in less required air exchange in the poultry house, providing considerable savings in energy costs".
